

Born from a passion for filmmaking and a lack of portable, user-friendly equipment, Syrp designs products with a filmmaker first approach enabling content creators to focus more on their creativity rather than technically challenging equipment.

Based out of the North Island of New Zealand, Syrp specializes in designing and manufacturing portable, smart motion control technology capable of automating camera movement for motion video, time-lapse, product photography, panorama and more.

Featuring all the latest cutting-edge technology, Syrp products are controlled by an easy-to-use mobile app compatible with an ever-expanding product line and suitable for entry-level content creators and for more experienced professional users. Syrp's modular products give content creators the flexibility to start small and add to their kit as they develop their skillset and need a greater range of motion and features. The company's focus on user-centered design and constant innovation makes them a clear leader in the market for motion control products.

Genie II

Simple, portable and setting the benchmark in motion control.

A new era of motion control! The Genie II is stronger, faster and quieter than its predecessor (Genie) with the same attention to simplicity and portability. It still fits inside your backpack, but this time you'll also be getting keyframes, high-speed wireless connection, up to 3-axis motion control and much, much more.

- Full keyframe setup for time-lapse and video.
- Multi-row Panorama (Genie II Pan Tilt).
- Integrated joystick and in-app for live movement control
- Swappable battery packs.
- Universal slider compatibility.
- App control on iOS and Android.

Features are updated regularly via a free software update. Check the website for more details.

Genie II mini

An easy-to-use device for panning time-lapse or video with wireless app control.

The perfect entry-level time-lapse tool as well as a professional add-on to our current Genie range for multi-axis control. Operated by a beautifully simple app with factory presets, you will never need to go without motion control again.

- Pocket-sized motion control.
- Modes for Time-lapse, Video, Panorama and Product Turntable.
- Keyframed motion control.
- Beginner friendly with factory presets.
- Ease in / ease out for smooth ramping movement.
- HDR Time-lapse & Panorama shooting with bracketed exposures.
- Combine two Genie Mini II together for pan tilt control.
- Use with the Genie II for pan track and 3 axis control.
- Compatible with most digital cameras.
